

Project Design Phase-II

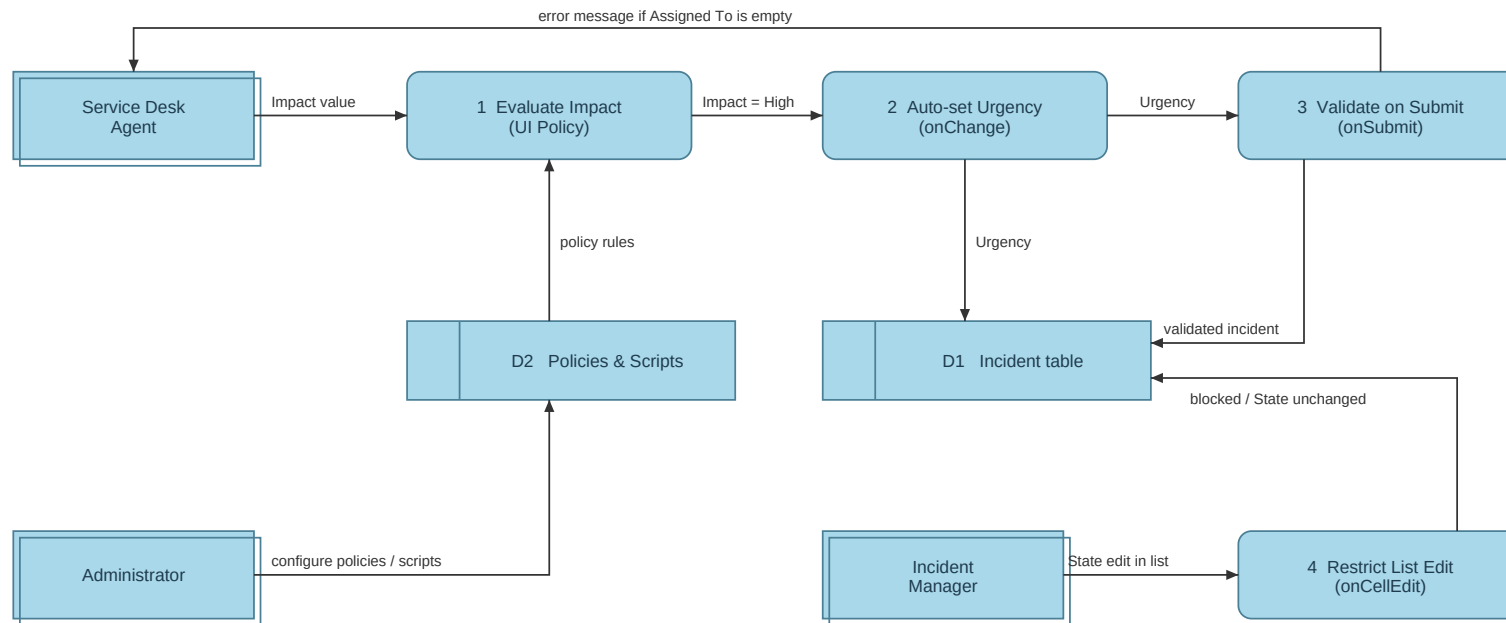

Data Flow Diagram & User Stories

Team ID	SWTID-2026-5404
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	4 Marks

Data Flow Diagrams:

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. A neat and clear DFD can depict the right amount of the system requirement graphically. It shows how data enters and leaves the system, what changes the information, and where data is stored.

Example: DFD Level 0 – Implement Client Script & UI Policy (Incident)

1. Administrator configures the High Impact Control UI Policy and the three Client Scripts, stored in D2.
2. Service Desk Agent opens an Incident and sets Impact; the UI Policy (1) evaluates the Impact value using the rules in D2.
3. When Impact = High, Assignment group becomes mandatory and Urgency becomes read-only; the onChange script (2) sets Urgency to High and updates D1.
4. On Submit, the onSubmit script (3) checks Assigned To; the save is blocked with an error message if it is empty, otherwise the Incident is stored in D1.
5. When a State is edited from the Incident list, the onCellEdit script (4) alerts the Incident Manager and the State remains unchanged.

User Stories

Use the below template to list all the user stories for the product.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Administrator	UI Policy Configuration	USN-1	As an administrator, I can create the High Impact Control UI Policy on the Incident table with the condition Impact is 1 - High.	The policy is active and listed under System UI → UI Policies	High	Sprint-1
		USN-2	As an administrator, I can add a UI Policy Action that makes Assignment group mandatory.	Assignment group is mandatory when Impact = High	High	Sprint-1
		USN-3	As an administrator, I can add a UI Policy Action that makes Urgency read-only.	Urgency is read-only when Impact = High	High	Sprint-1
		USN-4	As an administrator, I can enable Reverse if false on the policy.	Mandatory and read-only settings revert when Impact is no longer High	Medium	Sprint-1
	Client Script Automation	USN-5	As an administrator, I can create an onChange Client Script on the Impact field.	Urgency is set to 1 - High and an info message appears when Impact = High	High	Sprint-2
		USN-6	As an administrator, I can create an onSubmit Client Script (Prevent save if Assigned To missing).	Save is blocked and an error shows on Assigned To when Impact = High	High	Sprint-2
		USN-7	As an administrator, I can create an onCellEdit Client Script on the State field.	An alert appears and State is unchanged when edited from the list	Medium	Sprint-2
Service Desk Agent (Form user)	Incident Creation	USN-8	As an agent, I can set Impact to High on a new Incident and see Urgency set automatically.	Urgency shows 1 - High and is read-only	High	Sprint-2
		USN-9	As an agent, I can save a High impact Incident once Assigned To is filled.	Incident saves successfully with no errors	High	Sprint-2
		USN-10	As an agent, I can lower Impact to Medium and continue working.	Assigned To is no longer mandatory and Urgency is editable	Medium	Sprint-3
	Incident Update	USN-11	As an agent, I can change State from the Incident form.	State change saves successfully on Update	Medium	Sprint-3
Service Desk Agent (List user)	List Edit Control	USN-12	As a list user, I am prevented from changing State by double-clicking in the list.	Alert is displayed and State value remains unchanged	Medium	Sprint-3
Incident Manager	Data Quality Oversight	USN-13	As an incident manager, I can rely on High impact Incidents always having an assignee.	No High impact Incident can be saved without Assigned To	High	Sprint-3
Administrator	Testing	USN-14	As an administrator, I can test mandatory, successful save, reverse condition, list edit and form update scenarios.	All configured behaviors work as expected	Medium	Sprint-3
