

Project Development Phase Model Performance Test

Team ID	SWTID-2026-5404
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	

Model Performance Testing:

Project team shall fill the following information in model performance testing template.

S.No.	Parameter	Values	Screenshot
1.	Model Summary	Rule-based client-side controls (no ML model) on the Incident table: - UI Policy "High Impact Control" (Impact is 1 - High; Reverse if false = true) with actions: Assignment group = Mandatory, Urgency = Read-only - onChange script: sets Urgency to High when Impact = High - onSubmit script: blocks save if Assigned To is empty for High impact - onCellEdit script: blocks State edits from the list view	 The screenshot shows the 'UI Policy' configuration page for 'High Impact Control'. It is set to apply to the 'Incident' table. The 'When' condition is 'Impact is 1 - High'. The 'Actions' section shows 'Assignment group' set to 'Mandatory' and 'Urgency' set to 'Read-only'. The 'Scripts' section shows an 'onChange' script that sets 'Urgency' to 'High' when 'Impact' is 'High'.
2.	Accuracy	Training Accuracy - Not applicable (no model training; scripts are deterministic rules) Validation Accuracy - 100% (5 of 5 test activities passed: mandatory enforcement, successful save, reverse condition, list-edit blocking, form-based update)	  The top screenshot shows the 'Incident' form with 'Impact' set to 'High'. The 'Assignment group' is 'Mandatory' and 'Urgency' is 'Read-only'. The bottom screenshot shows the 'Incident' list view with 'Impact' set to 'High'. The 'Assignment group' is 'Mandatory' and 'Urgency' is 'Read-only'.
3.	Fine Tuning Result(if Done)	Validation Accuracy - No fine tuning required. Reverse-condition behaviour verified: Impact changed High → Medium makes Assigned To non-mandatory and Urgency editable again.	 The screenshot shows the 'Incident' form with 'Impact' set to 'Medium'. The 'Assignment group' is 'Non-mandatory' and 'Urgency' is 'Editable'.
