

Project Design Phase
Problem – Solution Fit Template

Team ID	SWTID-2026-5404
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	2 Marks

Problem – Solution Fit Template:

The Problem-Solution Fit simply means that you have found a problem with your customer and that the solution you have realized for it actually solves the customer's problem. It helps entrepreneurs, marketers and corporate innovators identify behavioral patterns and recognize what would work and why

Purpose:

- Solve complex problems in a way that fits the state of your customers.
- Succeed faster and increase your solution adoption by tapping into existing mediums and channels of behavior.
- Sharpen your communication and marketing strategy with the right triggers and messaging.
- Increase touch-points with your company by finding the right problem-behavior fit and building trust by solving frequent annoyances, or urgent or costly problems.
- **Understand the existing situation in order to improve it for your target group.**

Template:

Define CS, fit into CC	1. CUSTOMER SEGMENT(S) CS Who is your customer? i.e. working parents of 0-5 y.o. kids • ServiceNow Service Desk agents and fulfillers who create and update Incidents • Incident managers who rely on clean data for triage, routing and SLA reporting • ServiceNow administrators who configure the instance	6. CUSTOMER CONSTRAINTS CC What constraints prevent your customers from taking action or limit their choices of solutions? i.e. spending power, budget, no cash, network connection, available devices. • Needs admin / configuration access to build rules • Client-side rules run only in the browser UI, not for imports or APIs • Must not slow the form or conflict with the many existing UI Policies • Agents work fast and cannot be expected to remember every rule	5. AVAILABLE SOLUTIONS AS Which solutions are available to the customers when they face the problem or need to get the job done? What have they tried in the past? What pros & cons do these solutions have? i.e. pen and paper is an alternative to digital notetaking • Manual checks and user awareness – cheap but inconsistent • Always-mandatory dictionary fields – simple but not conditional on Impact • Server-side Business Rules / Data Policies – strong but no instant form feedback	Explore AS, differentiate
	2. JOBS-TO-BE-DONE / PROBLEMS J&P Which jobs-to-be-done (or problems) do you address for your customers? There could be more than one; explore different sides. • Make fields mandatory only when Impact is High • Auto-populate Urgency for High impact Incidents • Prevent save when Assigned To is missing • Stop State being changed directly from the list	9. PROBLEM ROOT CAUSE RC What is the real reason that this problem exists? What is the back story behind the need to do this job? i.e. customers have to do it because of the change in regulations. • Incident data is entered manually and relies on user awareness • No conditional validation at the user-interface level • Incomplete or inconsistent records hurt reporting accuracy, SLA compliance and service quality	7. BEHAVIOUR BE What does your customer do to address the problem and get the job done? i.e. directly related: find the right solar panel installer, calculate usage and benefits; indirectly associated: customers spend free time on volunteering work (i.e. Greenpeace) • Agents open the Incident form, set Impact and fill the fields • Managers chase missing assignees and fix records after the fact • Users edit State quickly in the list view to save time	
Identify strong TR & EM	3. TRIGGERS TR What triggers customers to act? i.e. seeing their neighbour installing solar panels, reading about a more efficient solution in the news. • A High impact Incident is raised without an owner • SLA breach or poor data in reports	10. YOUR SOLUTION SL If you are working on an existing business, write down your current solution first, fill in the canvas, and check how much it fits reality. If you are working on a new business proposition, then keep it blank until you fill in the canvas and come up with a solution that fits within customer limitations, solves a problem and matches customer behaviour. • UI Policy <i>High Impact Control</i>: Assignment group mandatory, Urgency read-only, Reverse if false • onChange script sets Urgency to High and shows an info message • onSubmit script blocks save if Assigned To is empty • onCellEdit script blocks State edits in the list	8. CHANNELS of BEHAVIOUR – 8.1 ONLINE CH What kind of actions do customers take online? Extract online channels from #7 • Incident form and list in ServiceNow UI • Info / error messages and alerts on screen	Extract online & offline CH of BE
	4. EMOTIONS: BEFORE / AFTER EM How do customers feel when they face a problem or a job and afterwards? i.e. lost, insecure > confident, in control - use it in your communication strategy & design. Before: rushed, uncertain, frustrated by bad data > After: confident, in control, trusting the data		8.2 OFFLINE CH What kind of actions do customers take offline? Extract offline channels from #7 and use them for customer development. • Service desk calls and walk-ups • Team briefings, training and SLA review meetings
