

Project Design Phase-II

Solution Requirements (Functional & Non-functional)

Team ID	SWTID-2026-5404
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	UI Policy Configuration	High Impact Control UI Policy on Incident (Impact is 1 - High) Assignment group set as mandatory Urgency set as read-only Reverse if false enabled
FR-2	Client Script Automation (onChange)	Trigger on Impact field change Auto-set Urgency to 1 - High when Impact is High Display info message to the user
FR-3	Save Validation (onSubmit)	Block save when Impact is High and Assigned To is empty Show error message on the Assigned To field
FR-4	List Edit Control (onCellEdit)	Block State changes made directly from the Incident list Show alert; allow State update from the Incident form

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	Clear field behavior, info messages and error boxes guide users; rules apply automatically on the Incident form.
NFR-2	Security	Configuration limited to users with administrative access; controls enforce mandatory data before save (client-side rules should be backed by server-side rules).
NFR-3	Reliability	Rules behave consistently on load, change and submit; Reverse if false restores field state when the condition is not met.
NFR-4	Performance	Lightweight client scripts and UI Policies run instantly in the browser without noticeable form delay.
NFR-5	Availability	Controls run as part of the ServiceNow platform and are available whenever the Incident form and list are available.
NFR-6	Scalability	Scripts and policies are scoped to the Incident table and can be extended to more fields, conditions or tables.
